# AIAA 3201 Project Release

# Project Brief

- Four advanced topics for you to choose, please check Canvas documents for details
  - Video Super-Resolution
  - Visual Navigation in 3D Environments
  - Video Object Removal & Inpainting
  - Generative Sparse-View 3D Reconstruction

# Project Requirement

- Team formation
  - **2 persons a team**, we will collect your information by this week. Let TAs know if you have problems to find a teammate

- Computational resources
  - You may apply the online computing credits from TAs, when you try to run deep learning models
  - Note the credit is limited for each student, please do not waste

- Project timeline
  - **Week 11 & 12**, present your project progress in class.
  - **15th May 11.59PM**, project submission in Canvas deadline

# Project Oral Presentation

- **At least Part 1** of the project should be completed
- You need to give introduction on your **basic methods, experiments and the plan for your next step**
- Each team submit an **8-min video recording** of your presentation
- **No need to worry!** The presentation contributes **very little (5%)** to your final grades, as long as you show your progress efforts, you earn it.
- We will try to give your feedback to improve your project

# Project Final Submission

- We follow **standard** research publication release process
  - **(Mandatory)** Upload your report to Arxiv. Remember to register with your HKUST-GZ email to avail delay
  - **(Mandatory)** Release your code to the public by GitHub
  - **(Optional)** A demo video or a project page

- Zip **all the above files, the arxiv link and the Github link**, submit them in Canvas, by **15th May 11.59PM**

# Project Report

- **Abstract & Introduction**: Background, motivation and solution overview. Explicitly include your GitHub repository link at the end of abstract.
- **Related Work (IMPORTANT)**: You must review and cite **at least all papers** listed in the Reference Section. Expanding beyond this list is encouraged.
- **Method**: Explain the technical roadmaps in your own words.
- **Experiments**: Present quantitative results (Tables) and qualitative analysis (Figures).
- **Conclusion**: Summary, limitations, and future work.

# Q & A

香港科技大学(广州)
